

Roles, Logins and Release Report

Every role the portal defines, who may sign in where, what each role sees, and the verified state of the production release.

Environment `pixoushrportal.pixous.info` Release `5de67e6` Date 19 August 2026 Status Live and verified

1 Roles

Roles are held per user and a user may hold several. `SUPER_ADMIN` is granted every permission by the seed, so it is not listed permission by permission below. **Mobile** shows whether the role can sign in to the Android app; roles marked **WEB ONLY** are sent to the web portal by design, because the administrative modules are too heavy for a phone.

CODE	NAME	SCOPE	PURPOSE	MOBILE
<code>SUPER_ADMIN</code>	Platform Super Admin	Both	Full configuration access; every permission	WEB ONLY
<code>COMPANY_ADMIN</code>	Company Administrator	Both	Top administrator of a company; answers a <code>SUPER_ADMIN</code> check	WEB ONLY
<code>BOARD_ADMIN</code>	Board Admin	Both	Display marker; real powers come from <code>SUPER_ADMIN</code>	WEB ONLY
<code>TECHNICAL_ADMIN</code>	Technical Admin	Both	Branding, modules, global announcements, AI assistant settings	WEB ONLY
<code>IT_HR</code>	IT HR / Payroll Manager	Digital	HR and payroll administration	ALLOWED
<code>IT_MGR</code>	IT Manager / Team Lead	Digital	Team approvals and appraisals	ALLOWED
<code>IT_TL</code>	Team Leader	Digital	Team attendance view and team leave approval	ALLOWED
<code>IT_EMP</code>	IT Employee	Digital	Self-service employee	ALLOWED
<code>IT_FIN</code>	Finance Officer	Digital	Payroll and expense approvals	ALLOWED
<code>IT_CEO</code>	CEO	Digital	Executive dashboards and policy	ALLOWED
<code>IT_AST</code>	IT Asset Manager	Digital	IT asset lifecycle	ALLOWED
<code>CV_HR</code>	Civil HR Manager	Infra	Labour compliance and workforce	ALLOWED
<code>CV_SUP</code>	Civil Supervisor	Infra	Site approvals and safety	ALLOWED
<code>CV_EMP</code>	Civil Site Employee	Infra	Site self-service	ALLOWED
<code>CV_ADM</code>	Civil / Facilities Admin	Infra	Sites and facilities	WEB ONLY
<code>CV_AST</code>	Civil Asset Manager	Infra	Machinery and materials	ALLOWED

The approval chain

Each rung offers exactly one kind of approver, so a request cannot skip the person who should see it. A team is a **designation** here, not a department, and the applicant is offered their own team's leader only.

Employee, up to 3 days → own team's TL · Employee, over 3 days → HR · TL → HR · HR → CTO
(Elamaran Subramaniyan, PIX-E100)

2 Logins

Sign-in is by **username and password**. The accounts below are created by database migration; every other account is created by HR through the Employees module, which sets the username and the initial password at that point.

EMPLOYEE CODE	USERNAME	NAME	ROLE	INITIAL PASSWORD
ADM0001	admin	System Admin	SUPER_ADMIN	Set at install; not held in the repository
PIX-E100	—	Elamaran Subramaniyan (CTO)	SUPER_ADMIN , COMPANY_ADMIN	Set by the administrator
BADM001	gokila	Gokila	SUPER_ADMIN , BOARD_ADMIN	Handed over separately
BADM002	maaran	Maaran	SUPER_ADMIN , BOARD_ADMIN	Handed over separately
PIX-I001	infra.admin	Infra Admin	CV_ADM	Handed over separately; change on first sign-in
PIX-I002	supervisor1	Supervisor 1 — PMC Workers	CV_SUP	Handed over separately; change on first sign-in
PIX-I003	supervisor2	Supervisor 2 — Construction	CV_SUP	Handed over separately; change on first sign-in
EMP0001 – EMP0005	—	Demo records from the seed	Mixed	Test1234@ — demo only, remove before handover

Passwords are deliberately absent from this document

Live account passwords are stored only as BCrypt hashes and are not recoverable from the database or the repository — which is correct, and means no list of them can be produced. Use **Employees → Reset password** to issue a new one. The single exception above is Test1234@, which the seed file itself documents for the five demo records; those accounts should be deleted before handover.

3 What each role sees

Sidebar sections are gated by role, by permission, and by whether the module is switched on for the company in the tech-admin module list. A section switched off for the company is hidden from everyone, whatever their role.

SECTION	WHO SEES IT	GATE
Dashboard	Everyone with a dashboard enabled	Dashboard visibility
Employees	HR, CTO and administrators — not employees or TLs	Role
Attendance	Employees, TLs, HR — not administrators	Role + ATTENDANCE
Employee / Team Attendance	TLs see their team; HR and above see all	ATTENDANCE_TEAM
Leave	Everyone who can take leave — not administrators	Role + LEAVE
Permission	Everyone	LEAVE
Leave Approvals	TL, HR, CTO	LEAVE_APPROVE

SECTION	WHO SEES IT	GATE
Leave Policies	HR and administrators	ORG_MANAGE
Payroll	HR, Finance, CTO	PAYROLL_RUN
Payslips	Employees and TLs — not administrators, not the CTO	Role + PAYROLL
Work Reports, Tasks, Claims, Assets	Everyone, scoped to their own records	Module switch
Supports, Complaints	Everyone raises; HR and above resolve	HELPDESK
Reports	HR, Finance, TL — not administrators	REPORT_VIEW
Chat, Calendar, Teams	Everyone	Module switch
Audit Log	Administrators and the CTO	Privileged
Fresh Start	Administrators and the CTO	Privileged
AI Assistant settings	Administrators and the CTO — /admin/ai-assistant	USER_MANAGE

The AI assistant answers according to who is asking

An employee gets self-service help — how to apply for leave, where their payslips are. HR, administrators and the CTO additionally get live organisation figures, and may name any employee to receive that person's attendance, leave, support tickets and complaints. Only the people a question actually names are looked up, so the answer stays fast as the company grows. The same privilege test runs on the server before any record is attached, so the wider answers cannot be reached by an employee account.

4 Release verification

Checked against the live environment on 19 August 2026, after deploying 5de67e6.

CHECK	RESULT	EVIDENCE
Backend unit tests	PASS	44 tests, 0 failures, 0 errors
Backend compile	PASS	Clean; image rebuilt and container healthy
Web typecheck and build	PASS	No TypeScript errors; 112 precache entries
HTTPS only	PASS	Plain HTTP answers 301 to HTTPS
API authentication	PASS	15 module endpoints all answer 401 unauthenticated
Bad credentials rejected	PASS	Login with a wrong password answers 401
Containers	PASS	web, backend, mysql, redis all up; backend healthy
Own-team approver list	SHIPPED	Shared resolver; Leave and Permission both narrowed
Four-digit year, starting with 2	SHIPPED	Guarded in the shared input, so every page inherits it
Payslip cards, My Payslips hidden	SHIPPED	Both page bundles rebuilt and served
CTO Employees module	SHIPPED	Present in the served bundle
Role-aware AI assistant	BLOCKED	Code is live; needs an API key — see below
Analytics service (face punch)	NOT RUNNING	Optional by design; needs disk — see below

5 Outstanding — needs a decision, not code

1. The AI assistant needs an API key

The assistant currently replies "the AI service is temporarily unavailable" for every user, including the CTO. The role-aware code is deployed and correct; what is missing is the language-model key, which the portal keeps in its own settings rather than in a configuration file. Sign in as an administrator, open **/admin/ai-assistant**, paste a Groq or Gemini API key and save. The assistant works from the next message; no deploy is needed.

2. The analytics service needs more disk

Face punch-in and the extra dashboard cards come from an optional analytics container that has never run in production. Its image carries PyTorch, dlib and EasyOCR, and building it filled the server's 29 GB disk, which briefly blocked a deploy. The disk has been reclaimed — 14 GB free — but there is not enough room for both this image and comfortable rebuild headroom. Enlarging the volume is the decision to take; until then the portal runs correctly without it, hiding the extra cards and reporting face punch-in as unavailable, exactly as designed.

3. Housekeeping

- Delete the five EMP0001–EMP0005 demo records, and with them the only password this repository documents.
- TURN port 5349 is closed in the security group. Calls work over 3478 UDP and TCP; opening 5349 adds one more fallback path on restrictive networks.
- Documents and Projects are placeholder sections with no backend behind them yet.
